To whom it may concern,

Global Medical Brigades (GMB) is a secular tax-deductible network of university groups. It is one of the nine Programs of Global Brigades, Inc., a 501(c)3 nonprofit organization and the world's largest student-led international relief organization. Global Brigade's mission is to provide communities in developing countries with sustainable solutions that implement a holistic service model, in order to improve the health, water, sanitation, and economic infrastructures. The current emphasis of GMB is centered on preliminary needs assessments in Honduras, Nicaragua, Ghana, and Panama. Since 2009, over 250,000 patients have been treated in over 100 communities. These communities are low-income villages with limited or no access to medicine otherwise.

Our group will travel to Ghana for ten days and operate a mobile medical unit, setting up small clinics to diagnose and treat patients at no cost. From in-take, to triage, to medical consultations, to filling the prescriptions, the groups experience the many realms of the medical profession under the guidance of licensed medical professionals.

The medications we are purchasing from you, both prescription and over the counter will be used to treat the patients in these underserved communities in Ghana. After an individual health assessment is conducted, the medications will be dispensed under the direct authorization of a licensed physician in the form of a signed and dated prescription. Treatment plans and usage instructions will be carefully explained to each patient, upon administering the medications.

The medications that have been ordered and donated will be used exclusively to treat the symptoms of the patients seen in the free clinics that will be set up in the week that we are in Ghana. If there is excess medication after completing all brigades, the medication will be donated to Global Brigades, to supplement future missions.

GMB's intent to purchase these medications is to provide the basic health needs that are inaccessible to many of these Ghanaian villages. Our top priority is to safely transport and administer the medications to the communities that we provide relief to, during our medical brigades trips. In these harsh economic realities, we realize our true wealth, including good health and access to healthcare. This contrasts with the third-world, whom cannot provide the most basic needs for their people. However, through volunteering and awareness, we can show our gratitude for the privileges others do not receive. For this reason, we immensely appreciate this service you are providing us with and want to recognize your impact in these humanitarian efforts.

Thank you,  
Ivana Marji
